USER GUIDE · SECONDARY STAGE · GRADES 9–12

# Voice Based Summarised Digital HPC

## by Mateen Yousuf

About the app and how to use it, step by step

Talk about the learner. The app fills the official Holistic Progress Card (HPC), asks only what is missing, and keeps every observation as evidence that you approve.

Created by Mateen Yousuf, Teacher, School Education Department
UT Resource person, Artificial Intelligence and Educational Technology

*Built from the official NCERT / PARAKH Holistic Progress Card (Secondary Stage) and its "How to fill the HPC" guide.*
*Independent tool — not an official Government / NCERT / PARAKH application.*

# 1. About the app

**Voice Based Summarised Digital HPC – Secondary Stage** is an installable web app (a Progressive Web App) that helps a teacher complete the **Holistic Progress Card (HPC) for the Secondary Stage, Grades 9 to 12**, by talking about the learner and tapping choices, instead of filling in a long form.

The complete official HPC sits underneath as the data model: Part A(1)–(6), Part B Group Project Work, Part C Problem-based Inquiry, Part D Classroom Interactions, Part E Online Courses, Part F Number of Hours, the Student's Competency Profile and the Credit Distribution. You answer in your own words (English, Hindi, Urdu or a mix); the app shows what it understood and asks only for what is still missing.

## What makes it different

| Idea | What it means for you |
|---|---|
| Voice first | Tap the microphone and speak naturally. Typing and tapping always work too. |
| Official wording kept | Statements, parameters, tables and credit values come from the Secondary Stage HPC. Nothing is renamed or simplified. |
| Nothing is assumed | If it was not said, it is not filled in. Missing items stay visible until answered or marked not applicable / not available. |
| You stay in control | The app suggests; you approve. AI suggestions are labelled AI DRAFT until you accept them. |
| Three abilities, three levels | Awareness · Sensitivity · Creativity, each at Beginner · Proficient · Advanced. |
| Works offline | Records are saved on your device. Poor internet does not lose your work. |

## What the app covers

- **Part A(1)–(6)** — general information, attendance (April to March), interests, self-assessment, goals, time management and Time Map, plans after school, Future Self, Accomplishments Inventory, Skills for Life.
- **Part B — Group Project Work** — set-up, Stage 1 (schedule, roles, barriers, learner reflection, teacher assessment), Stage 2 teacher assessment, Stage 3 rubric levels, learner reflection and peer feedback, overview scores, post-project reflections.
- **Part C — Problem-based Inquiry** (individual) — hypothesis, evidence, analysis, discussions, conclusion, three stages with learner, teacher and peer statements, overview scores.
- **Part D — Classroom Interactions** — discussion, debate, simulation/role play, lab experiment, digital learning (or another type). The teacher chooses five parameters per ability from the official library of 43.
- **Part E** — ten online courses with hours and completion. **Part F** — hours for group project, inquiry, interactions and skill training.
- **Student's Competency Profile** — 22 competencies across Grades 9–12 (B / P / A). **Credits** — official Grade 9–12 tables with NCrF levels and credit points.

> **Good to know** The app does not replace your professional judgement. It saves time and keeps the card complete and consistent with the official format.

## 2. Before you start

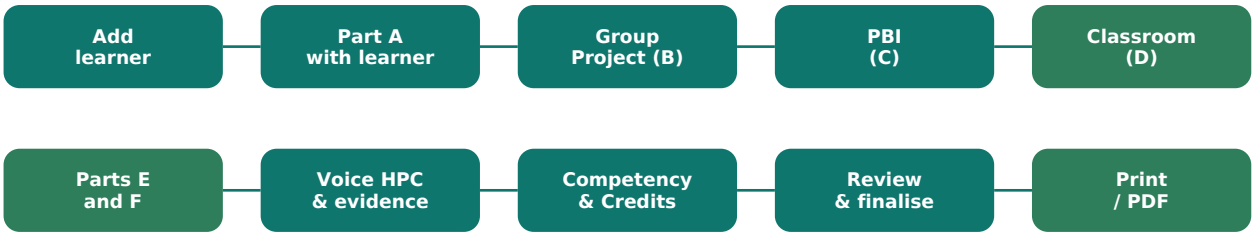

| You need | Details |
|---|---|
| A device | Android phone or tablet, or a laptop. A larger screen is comfortable for the competency table. |
| A browser | Google Chrome or Microsoft Edge recommended. Voice typing uses the browser's speech recognition. |
| Internet (sometimes) | Needed for voice typing and for the optional AI service. Everything else works offline after the first visit. |
| Your records (optional) | Previous HPC, school register, project documents or certificates — you can photograph or upload them. |
| A quiet corner | Voice recognition works best with little background noise. |

## 3. Install and first launch

| | |
|---|---|
| 1 | **Open the app address**<br>Open the web address you were given in Chrome or Edge (or run the files locally — see README). |
| 2 | **Install it**<br>Tap Install app at the top, or use the browser menu: Add to Home screen / Install. The app now opens like any other app. |
| 3 | **Allow the microphone**<br>The first time you tap the microphone, allow access. If you refused earlier, enable it in the browser settings. |
| 4 | **Open once with internet**<br>This lets the app store itself for offline use. After that it opens without internet. |
| 5 | **Check the status line**<br>At the top you will see "Saved on this device" and a green dot when online. A yellow OFFLINE MODE banner appears when there is no internet. |

**Tip** Want to look around first? Open Class and press Load demo learners (Aarav 9, Aisha 10, Rahul 11, Priya 12). Demo learners are clearly labelled DEMO and can be deleted at any time.

# 4. Quick start: the whole card in 10 steps

| | |
|---|---|
| 1 | **Add the learner**<br>Class → Add a learner (name and grade), or Load demo learners. |
| 2 | **Set up the school once**<br>Part A(1): school details are entered once and reused for every learner. |
| 3 | **Fill Part A with the learner**<br>Use “Entering as: Learner” so answers carry the learner’s source badge. Tap choices, or press the mic button and speak. |
| 4 | **Record a Group Project**<br>Part B → + New. Fill the set-up, then tick Stage 1, 2 and 3 statements. |
| 5 | **Record a Problem-based Inquiry**<br>Part C → + New. Hypothesis, evidence, analysis, then the stage statements. |
| 6 | **Record classroom interactions**<br>Part D → + New. Choose the type, select five parameters per ability, tick those the learner met. |
| 7 | **Speak your observations**<br>Voice & Evidence: describe what the learner did, check “what I understood”, Accept. |
| 8 | **Online courses and hours**<br>Part E and Part F: enter hours; totals are calculated; mark Exact / Approximate / Estimated. |
| 9 | **Competency Profile and Credits**<br>Choose B / P / A at year end; check the credit table for the grade. |
| 10 | **Review and finalise**<br>Review shows what is missing. Confirm & Finalise, then Print / Export PDF. |

# 5. Step by step in detail

## 5.1 Add a learner and the school (once)

Open **Class**, type the name, choose the grade and press **Add**. Open the learner and go to **A(1)**. At the top, fill the school information (name, address, village/ward, BRC, CRC, district, state, pin code, UDISE+ code, teacher code). It is saved once and reused for every learner. The grade chosen decides which grade columns of the Competency Profile and which credit table apply.

## 5.2 Part A — general information, attendance, interests

General Information is filled by the teacher in consultation with the caregiver/parent. Answer “Is the learner a child with disability (CWD)?”: UDID is asked only for CWD. For attendance enter school days and days present for each month; the percentage and total are calculated. If attendance falls below the benchmark (Settings, default 75%), the app asks for the reasons — **reasons are never inferred; the teacher or parent must give them**. Interests allow more than one option.

> **Who answers?** Use the “Entering as” menu (Teacher, Learner, Peer, Parent/Caregiver). Learner-only fields entered as Teacher show “Needs confirmation” until the learner confirms.

## 5.3 Part A(2)–(6) — self-assessment, goals, time, plans, inventory, life skills

These are mostly learner-driven. Tap the 1–5 scales or speak the answers. Goals keep the official separate fields (last year’s goal, status, one specific goal, how I will know, a week / 6 weeks / 6 months, strengths, home/community support, school support). Time Management uses Rarely · Sometimes · Usually · Almost Always. The Accomplishments Inventory uses Not Started · Started · Acquired · Reviewed for every official item.

## 5.4 Part B — Group Project Work

Press **+ New**. Fill subjects, curricular goals, competencies, learning outcomes (more than one allowed), tick pedagogies (including Drama/Theatre-integrated), the prompt, guiding questions, “What do I know?” and “What do I need to find out?”. Stage 1: the 10-day schedule, resources, roles, barriers (barriers are entered, never inferred), learner reflection, teacher assessment. Stage 2: teacher assessment. Stage 3: choose Beginner (5), Proficient (10) or Advanced (15) for each ability, then learner reflection and peer feedback. The overview panel shows the totals and the Beginner / Proficient / Advanced band for teacher, learner and peer, using the official score ranges.

## 5.5 Part C — Problem-based Inquiry

Individual work. Record the research prompt, hypothesis, guiding questions, evidence, analysis and synthesis, discussions and conclusion, the research schedule, and the Stage 1–3 learner, teacher and peer statements. Peer feedback stays separate from teacher assessment.

## 5.6 Part D — Classroom Interactions

Choose the type. For each ability the teacher **selects five parameters** from the official library (the app blocks a sixth), then **ticks** the ones the learner met; the total gives Beginner (0–1), Proficient (2–3) or Advanced (4–5). Learner reflection and peer feedback have their own statements and bands.

## 5.7 Parts E and F

Part E has the official ten rows (I–X): course, hours, completed; total hours are calculated and teacher confirmation is never assumed. Part F lists the official steps for Group Project, Problem-based Inquiry and Classroom Interactions, plus item 4 Learning in the Community (Skill Training). Absolute precision may not be possible, so mark each entry **Exact**, **Approximate** or **Estimated**.

## 5.8 Student’s Competency Profile

Filled by the teacher at the end of each year. Choose B, P or A under the learner’s grade. After Grade 9, transcribe the earlier years from the previous HPC (type them in, or photograph the card in Voice & Evidence and confirm). Only recorded levels are shown; improvement is never inferred, and an approved level is never replaced without asking.

## 5.9 Credits

The table for the learner's grade shows credits, NCrF level and credit points exactly as printed. The app checks that Credits × NCrF level equals the printed points and flags any mismatch; it never overwrites official values. For Grades 9 and 10 you can also enter the credit points earned per subject.

## 5.10 Voice HPC and the Evidence Bank

In **Voice & Evidence** press **TAP TO SPEAK** (or type) and describe what the learner did, for example: "During the debate she gave two arguments with evidence, listened to the other side and suggested a new way to present." Press **Show what you understood**. You see **WHAT I HEARD**, **WHAT I UNDERSTOOD** (marked AI SUGGESTION), and **What is still missing?** with a short follow-up question. **Accept** saves an item to the Evidence Bank with its source and date; **Reject** discards it. The app never decides a level for you.

## 5.11 Upload a document or photo

Choose a file (CSV, text, image, PDF). Nothing is imported silently: extracted values appear for review and are saved only when you press Accept. Photos and scans can only be read if you connect your own AI service (Settings); otherwise the app says "POSSIBLE EVIDENCE: none detected automatically".

## 5.12 Review, finalise, print

**Review** shows completion for every part, the missing items (tap one to jump to it), items needing confirmation and AI drafts. **Finalise HPC** asks you to confirm that you have reviewed the information; reopening a final HPC records an audit entry. **Print preview / Export PDF** prints all parts (A–F, Competency Profile, Credits). Demo learners are watermarked. You can also export CSV or JSON.

# 6. Reading the screen: statuses, badges and scores

## Field statuses

| Status | Meaning |
|---|---|
| Answered | A value is recorded and accepted. |
| Partly answered | Some of it is recorded (for example only the days present). |
| Missing | Nothing recorded yet. |
| Not applicable | Does not apply (for example UDID for a learner without disability). |
| Not available | The information does not exist; you marked it so. |
| Needs confirmation | Extracted by AI/document, or entered by the wrong person for that field. |

## Source badges

| Badge | Meaning |
|---|---|
| TEACHER ENTERED / VOICE | Typed, tapped or spoken by the teacher. |
| LEARNER / PEER / PARENT | Given by that person. |
| DOCUMENT / PHOTO | Taken from an uploaded file (needs your approval). |
| AI SUGGESTION · AI DRAFT | Suggested by the app; not final until approved. |
| APPROVED | Teacher approved. |
| CALCULATED | Worked out by the app (attendance %, totals). |

## Score bands (from the official Overview pages)

| Activity | Teacher | Learner | Peer |
|---|---|---|---|
| Group Project (B) | 5–11 / 12–18 / 19–26 | 0–3 / 4–6 / 7–8 | 0–1 / 2 / 3 |
| Problem-based Inquiry (C) | 0–5 / 6–10 / 11–16 | 0–2 / 3–4 / 5–6 | 0–1 / 2 / 3 |
| Classroom Interaction (D) | 0–1 / 2–3 / 4–5 | 0–1 / 2 / 3 | 0–1 / 2 / 3 |

Each range is Beginner / Proficient / Advanced. For Group Project the teacher total adds Stage 1 and Stage 2 ticks to the Stage 3 value (5, 10 or 15).

# 7. Settings, privacy and offline use

- **Settings**: voice language (English, Hindi, Urdu), low-attendance benchmark, optional AI service address.
- **Offline**: records, drafts, evidence and totals are saved on your device (IndexedDB). Voice recognition and the AI service need internet; the app says so.
- **Autosave**: the top bar shows “Saving…”, “Saved on this device”, “Offline saved · sync pending”.
- **Privacy**: learner information is never placed in web addresses. You can delete a learner, delete evidence, export everything (JSON), import a backup, or delete all local data.
- **AI key safety**: the AI service runs on your own server (server/proxy.js). No key is stored in the app.

# 8. Troubleshooting and questions

| Problem | What to do |
|---|---|
| No “Install app” button | Open the address with https (or localhost) in Chrome/Edge, reload once, then use the browser menu → Install. |
| Microphone does not work | Allow microphone permission; use Chrome or Edge; check internet; otherwise type. |
| Changes not showing offline | Open the app once with internet, then reload so the latest files are stored. |
| Cannot choose a sixth parameter | Part D allows five per ability; deselect one first. |
| A competency cell is greyed out | Cells for grades above the learner’s current grade are not applicable. Set the grade in Part A(1). |
| Data missing | Check you are on the same browser and device. Clearing site data deletes records — export backups regularly. |
| Is the app 100% complete? | No. See section 9 and the in-app Auditor for the known gaps. |

# 9. How the app follows the official documents

Every item on the Secondary Stage HPC has a stable field ID, a source page number and a route to completion (voice, text or tap). The in-app **Auditor** lists every part, the source-page matrix and runs 24 self-tests (field uniqueness, official counts, credit arithmetic, score bands, no-fabrication checks).

| Official part | In the app |
|---|---|
| Part A(1)–(6), pp.1–9 | Part A tabs |
| Plan to do Online Courses p.10; Part E p.38 | E tab (ten courses) |
| Part B Group Project, pp.11–18 | B tab |
| Part C Problem-based Inquiry, pp.19–28 | C tab |
| Part D Classroom Interactions, pp.31–37 (43 parameters) | D tab |
| Part F pp.39–40 | F tab |
| Credit Distribution pp.41–44 | Credits tab |
| Student’s Competency Profile (22 competencies × 4 grades) | Competency tab |

**Known gaps** PBI Assessment Parameters (source pp.29–30) are not yet available as a pick-list for the “two additional parameters”. Per-subject credit tables exist in the source for Grades 9–10 only. Photo/scan reading needs your own AI server. The app therefore does not claim 100% coverage.

**No fabrication** The app never invents attendance, learner answers, peer or parent feedback, research data, levels, hours or credits. Missing stays MISSING.

# 10. One-page quick reference

| I want to… | Do this |
|---|---|
| Add a learner | Class → Add (name, grade) |
| Speak instead of typing | Press the mic button next to a field, or Voice & Evidence → TAP TO SPEAK |
| See what is missing | Review tab → What is still missing? |
| Record a project / inquiry / interaction | Tab B / C / D → + New |
| Pick Part D parameters | Select five per ability, then tick |
| Enter online-course or time hours | Tab E / F (mark Exact / Approximate / Estimated) |
| Record Competency levels | Competency tab → B / P / A |
| Check credits | Credits tab (flags mismatches) |
| Approve an AI suggestion | Accept (Voice & Evidence) or ⋯ → Approve |
| Print the card | Review → Print preview / Export PDF |
| Back up data | Settings → Export all (JSON) |
| Work offline | Install the app and open it once online |

Created by Mateen Yousuf, Teacher, School Education Department · UT Resource person, Artificial Intelligence and Educational Technology.
